Décor collection

Whether used to cover entire surfaces or only on particular sections, on façades, balconies, entrance porches or reception areas – The Wood, Concrete, Metal and Stone effect finishes in the ALUCOBOND® design range create unique highlights both inside and outside. Crisp, vibrant colours, a three-dimensional appearance with the opportunity of adding metallic effects provide even more design scope.

We also offer the option of coating the surfaces with a tactile lacquer to enhance both their texture and visual appeal. This special coating comes in two different versions and gives the Wood and Concrete series, in particular, an even more authentic and tactile texture.

Our ALUCOBOND® design décors are all created using a top-grade printing process, and then stove-enamelled with a special varnish. This process guarantees a durable and resistant surface which not only protects your façade but also retains its vibrancy and impact for many years to come. ALUCOBOND®'s tried and tested shaping behaviour (e.g. folding, round bending)

Individual décors – no limits

There are no limits to creativity when it comes to individual design: architects can come to us with any and every design concept – no matter whether it is a special pattern, imitation stone or a printed three-dimensional façade image. We digitalise your idea and turn it into durable, high-quality façade panels which transform your vision into reality. You will find a number of relevant examples from page 12 onwards.

combined with these qualities provide you with unlimited scope for your creativity and architectural style. On request, installation simulations can also be provided to visualise the appearance on the building. Get in touch with us, we will be happy to assist you in implementing your creative ideas for your individual architectural projects.

The “Wood” collection brings the warm, inviting appeal of wood to your façades.

Inspired by the rich textures and tones of various types of wood, our ALUCOBOND® wood-look finish façade panels offer a low-maintenance alternative to real wood. These surfaces are perfect for projects which, despite using modern, durable materials, are keen to promote harmony between the project itself and its natural surroundings.

The “Concrete” collection offers the typical concrete look – just right for urban and minimalist architectural styles.

Our concrete look ALUCOBOND® façade panels combine the rugged beauty and authenticity of exposed concrete with the advantages of modern building materials. These finishes are the ideal choice for projects which want to merge a strong, industrial atmosphere with a hint of the avant-garde.

Modern glamour and industrial subtlety

Our “Metal” collection embodies the vibrant elegance and sophisticated appeal of metallic surfaces. The finishes reflect the ageless lustre of metals such as copper, corten steel or perforated metal and ensure every building has a striking, industrial touch. The metallic look is perfect for innovative, contemporary architecture, featuring not only a striking appearance but also impressive durability.

Natural elegance and ageless beauty

Your façades take on the fascination of natural stone with the “Stone” series. Inspired by planet earth’s sublime textures and hues, our ALUCOBOND® stone-look façade panels offer an exceptional opportunity to emphasise distinctive architectural elements. This collection combines the robust aesthetics of stone with the technical advantages of aluminium composite panels, making it both durable and very easy to maintain. It is the ideal choice for projects that aim for a natural yet modern look.

Unlimited
creative freedom.

Creativity knows no bounds in the “No Limits” range: we simply take your design idea – no matter whether it is a unique pattern, a stone slab or wallpaper – and digitalise it with the utmost precision to produce high-quality ALUCOBOND® façade panels.

Our special printing process offers several advantages. It ensures uniform colour reproduction and high colour stability with minimal pattern repeat, a particularly important factor on large façade surfaces. The material is also extremely weather-resistant and easy to clean, which not only extends the façade’s service life but also reduces the need for maintenance and the associated costs. Thanks to the UV-resistant coil coating paint, the colours remain vibrant and unchanged for many years. This means that your idea is transformed into an real work of art, which is outstanding not only due to its aesthetics but also its impressive durability.

Explore the boundless scope of your imagination and create extraordinary architecture with our individual design surfaces.

Alongside your own ideas, you also have access to our database, which already contains many inspiring design options.

Individual design to your specifications

Send us a sample or sketch of your design proposal, and we will digitalise it for you. Once the resulting design has been sealed with a special UV coating, it will be a impressive feature on your building envelope. We ensure that the results live up to your expectation by offering numerous design options and by working with you very closely.

appearance

Apartment complex in Auckland

In the New Lynn Merchant Quarter project in New Zealand, the architect had actually specified small HPL panels. However, using digitally printed ALUCOBOND® design, we created the impression of small elements and joint patterns on large panels. This enabled us to deliver large elements. The fabricator and general contractor chose this solution as it meant they only had to use 10 % of the material initially estimated. Not only did this reduce the installation time drastically, it also saved over USD 100,000 in costs.

ubineum in Zwickau

For the “ubineum” project in Zwickau, the architects originally wanted to create a parametric 3D façade. However, initial calculations showed that this project would prove too costly. As a result, we opted for a 3D digital print façade. With our ALUCOBOND® design series, we were able to achieve this vision to perfection with a metallic base colour and high-precision direct-to-substrate digital printing. This allowed us to create an impressive, three-dimensional appearance which is both aesthetically pleasing and cost-effective.
